# Abstract

The advent of cryptocurrency and blockchain technology has disrupted the traditional finance and investment sectors. Decentralized Finance (DeFi) is the hottest trend in cryptocurrency right now and is the best product of cryptocurrency, so far. DeFi has outperformed the traditional financial systems that are controlled by a centralized governing authority. DeFi, on the other hand, is decentralized, and the storage of data is widely distributed across nodes of blockchain, making the data tamper-proof.

The DeFi replacing the entire traditional finance is not far away. Getting started with DeFi is the biggest challenge for beginners in the industry. There is a need for a platform that allows people to make DeFi more secure, more intuitive, and more predictable. If that is the case, people can really make wonders with DeFi protocols compared to the traditional stock markets, where the returns are limited, unmindful of how huge the investment is. Dexlabs is the platform you are looking for that offers various insight tools including but not limited to crypto fintech news, ICO listings, and DEX launchpads to give a better DeFi experience for people. The products offered by Dexlabs provide enhanced decision-making by letting the users know every possible detail about a DeFi project.

# Problem Statement

The cryptocurrency market is volatile, unlike the traditional stock markets, as they operate 24x7 every day. The market capitalization and trading volumes are really high, which makes the price of the tokens fluctuate. When you are getting your feet wet with crypto, trading could be really risky without an in-depth analysis of market trends. One wrong move at the beginning might put an end to your crypto journey. The risks are due to the market that widens daily and comes full of uncertainties.

New investors definitely need a platform that eases their hassle and makes tradings prosper. There are certain self-centered DeFi projects that focus more on maximizing their profits rather than bringing value for the investors. Choosing a proper DeFi platform becomes the need of the hour.

# Dexlabs - The Potential Solution

Dexlabs is designed with the ultimate aim of helping the DeFi community with the proper provision of a wide variety of products under a single roof. Whether it can be staking, crypto news, DEX launching, ICO listings, or vesting, Dexlabs becomes the one go-to place for all your needs.

Dexlabs helps DeFi projects to launch take their platforms to a wide range of crypto enthusiastic communities across the world through its DEX launchpad. Also, Dexlab's vesting platforms allow the DeFi platforms to lock their tokens to prove their commitment to the community. This creates a balanced and genuine relationship between the platform and the users.

The investors and traders can get to know every single update on the cryptocurrency and DeFi space through Dexlab's fintech news platform. In addition to this, the users can get to the list of ICOs and become part of game-changing projects in the near future.

# Dexlabs - Fintech Crypto News

## An Overview

Dexlab covers fintech, blockchain, and DeFi bringing you the latest news and analyses on the future of blockchain technology. Dexlab's Fintech crypto news is the leading independent digital media resource covering a wide range of news on blockchain technology, crypto assets, and emerging fintech trends. Each day Dexlab delivers the most accurate and up-to-date news from both the decentralized and centralized worlds.

## A Tech Insider

Our editorial content is based on our passion to deliver unbiased news, in-depth analytics, comprehensive cryptocurrency price charts, insightful opinion pieces, as well as regular reports on the social transformation that digital currencies bring.

We believe that the decentralized world will grow exponentially, becoming an integral part of our daily lives. We work every day to help educate our readers and raise awareness of the intricacies and advantages offered in today's digital revolution.

With technology breakthroughs now occurring in fields such as AI, VR, nanotech, quantum computing, and an increasing number of businesses, entrepreneurs, and consumers adopting blockchain technology in everyday life, we aim to inform, educate, and share valuable information with our readers.

# ICO Listing

The sole aim of Dexlabs ICO listing is to provide detailed information about the ICO projects to the investors. So they could make the right choice and invest their money into the right projects. On the Dexlabs platform, you just need to select the project, and you will receive all the information and analysis related to it. This information is then reviewed by crypto experts. Dexlabs ICO listing is an independent agency, and we never partner with any advertisement or blockchain agency, to give you false information. We do not just analyze the open-source information on ICO and other currencies, but we also do research on the level of risks on investment and hidden facets of blockchain projects.

## Features of ICO Listing platform

Our ICO listing platform provides you features like ongoing projects, upcoming projects, and past projects so you can keep track. Global investors can get the opportunity to invest in new coins worldwide. If you want a daily dose of ICO information or the latest updates, then the Dexlabs ICO listing should be your destination. Once you become a subscriber, you will get weekly ICO plans on your email address. Additionally, you will get more information on ICO's latest news from our Twitter and telegram page. We also have an advertising program where you can promote your ICO. But you need approval from the Dexlabs team to take part in this program.

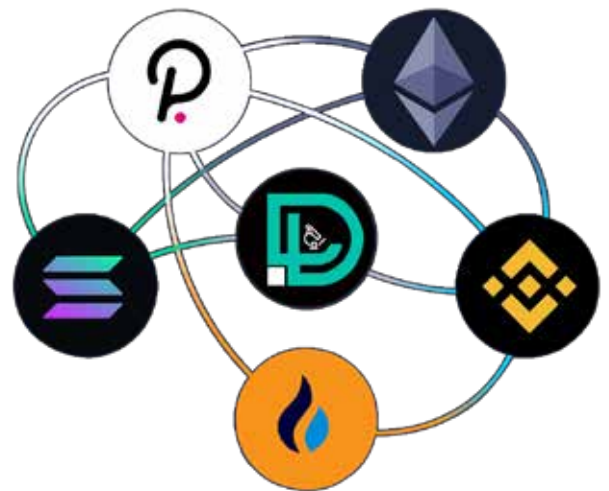

# Dexlabs Staking

Staking allows a user to lock or hold his funds in a cryptocurrency wallet to participate in maintaining the operations of a proof-of-stake (PoS)-based blockchain system. It is similar to crypto mining in the sense that it helps a network achieve consensus while rewarding users who participate.

## Diversified Income Stream

In staking, the right to validate transactions is decided upon how many coins are “locked” inside a wallet. However, just like mining on a PoW platform, stakers are incentivized to find a new block or add a transaction on a blockchain. Apart from incentives, PoS blockchain platforms are scalable and have high transaction speeds.

By staking in Dexlabs, traders can diversify their income stream and monetize their idle funds. Keeping your crypto assets idle in your wallets is not a wise use of them. Instead, stake them at Dexlabs for a better APY than what traditional financial bodies like banks offer.

# DEX Launchpad

Dexlabs helps the DeFi projects launch their Initial DEX Offerings (IDO), through its introduction of DEX Launchpad, the exclusive token launch platform for transformative DeFi projects. With the dawn of the IDO, crowdfunding enters a whole new level with the safe and easy use of cryptocurrencies to benefit both DeFi projects and their investors.

Before Launchpad, blockchain projects staged their own Initial Coin Offerings (ICOs) to raise crypto funds for their own growth and development. Results have varied under this old approach, with each success story being matched by cautionary tales of failures and frauds, and crypto users lack necessary protections and were left on their own.

The introduction of IDOs on the DEX Launchpad spurred a new paradigm under which projects can raise funds and users can support these projects in a more convenient and safer way. Here are the various advantages that DEX Launchpad was able to offer to the entire crypto industry:

## Token launches within a trusted platform

DEX Launchpad provides a way through which new crypto projects can raise capital from a platform that is already used by most of the crypto world. As the renowned DeFi platform, Dexlabs already has access to crypto holders and investors, who are likely to be interested in gaining early access to high-quality token sales.

## Protections for both users and projects

Dexlabs takes care of its crypto users with top-notch security, and this extends to token sales. By using DEX Launchpad, DeFi projects don't have to worry about creating their own fundraising platform and risk being a target for attacks from bad actors. Meanwhile, investors don't have to worry about taking out their funds from the DEX launchpad, which is where they are mainly using their crypto assets anyway, and risking unnecessary losses.

## Dexlabs - Vesting platforms

### 1) Team vesting

The team can lock in their team's token allocation to prove their commitment to the community. Vesting is such an important aspect of starting and running a successful DeFi project, it's important to first clearly define vesting and its context within a project. Vesting gives those who work for a company an incentive to perform well and remain under the company's employment, as their rights to employer-provided assets will accrue over time.

### 2) Venture vesting

To create a good business gesture it is always suggested to secure the private sales over several months to make sure that none of the big investors jeopardize the project. This enhances the transparency and authenticity of the project. Venture vesting is important when you seek seed funding through both angel investors and venture capital firms to have a plan in place. Founders will generally have more preferential vesting schedules than hired management teams or employees and venture capital firms will typically grant you additional credit for the time you've been involved in developing your business.

### 3) Community vesting

This community vesting is nothing but locking up tokens for truly involved members to get the community more seriously involved in the project. These are often set as one or two years after the launch of a cryptocurrency. For example, if a startup creates a cryptocurrency and launches it through an IDO, they may define a lockup period for the team of two years, meaning that no member of the project will be able to access their tokens before the lockup period ends. This brings a positive sentiment about the project and the team as it will likely keep them motivated to focus on long-term work, without worrying about the market value of their token.

## Dexlabs - Network Bridging

Convert your assets from Ethereum to Binance Smart chain to trade with cheap fees. With Dexlabs network bridging, you can convert your Ethereum assets (ERC20, ERC711, ERC1155) to Binance smart chain and get back with 100% proof of value. The Network bridge is initially deployed on the Binance Smart Chain that can hold Ethereum-based assets as well. Dexlabs network bridging is open for everybody to convert assets between the blockchains to enhance scalability and interoperability. The entire process is decentralized without any involvement of centralized authority. The conversion is genuine and lightning-fast. This entire conversion is taken care of by the smart contracts and any interaction with the smart contract will go directly, with no backend involved.

# Token Bulk Sender

For bounty managers, organizers of airdrops or events, who usually send tokens to a number of users, sending to the individual address separately is a time-consuming and hectic task. Therefore a better solution is needed so that the sending to multiple addresses can be done in a single click, which can also save a lot of time & energy. Many people still do this manually, one transaction at a time. This process is time-consuming and prone to error.

Dexlab's Token bulk sender is a DAPP that allows a user to send thousands of token transfers in a very efficient way by batching them in groups of 1-200 token transfers per transaction. This automation saves time by automatically generating transactions to cryptocurrency wallets.

## Why Dexlabs?

Improved Security

More dedicated  
customer-centricity
